

Application Group	Application	Description
File Transfer	BitTorrent	A peer-to-peer file sharing protocol used for transferring large amounts of data.
	eDonkey	eDonkey/eMule peer-to-peer file sharing.
	Gnutella	A large peer-to-peer file-sharing network.
	iMesh	A media and file sharing client with online social network features.
	Manolito	Manolito P2P (MP2P) is a free peer-to-peer file sharing network. Users can download music, create playlists, and use instant messaging to chat with friends.
	Pando	Pando is free file sharing application that uses both peer-to-peer and client-server architectures. Users are able to send files that may be too large to send via email.
	WinMX	WinMX is a free peer-to-peer file sharing program. It runs on the Windows operating system, however the official WinMX website and WinMX servers have been offline since 2005 as a result of an increased presence of dummy files on the site, which led to a lawsuit. The application now operates through third-party modifications.
